MyCampus

1. **What the app is**
   MyCampus is a category of mobile applications used by universities that focuses on a centralized digital platform for students. These applications are typically used by individual institutions and aim to gather student information, such as schedules, academic records, announcements, and access to university systems, in one place.

2. **What is good about MyCampus**
   - Centralises student information into a single app
   - Reduces the need to visit multiple websites or portals
   - Provides quick access to announcements and notifications
   - Familiar dashboard-style interface for students
   - Helps students stay organised with academic schedules and reminders

3. **What is bad / limitations of MyCampus**
   - Primarily focused on academic information, not student services
   - Limited or inconsistent access to support services (e.g. IT, facilities, student help)
   - Features vary significantly between institutions
   - Can feel cluttered due to too many unrelated functions
   - Often lacks clear service booking or request tracking

4. **Features worth reusing**
   - Single sign-on for students
   - Centralised dashboard
   - Push notifications for important updates
   - Quick links to frequently used resources

5. **Why it is relevant to our project**
   MyCampus is a centralise academic app, so it does not prioritise student services such as booking appointments, submitting service requests, or tracking support issues. This identifies a need that the proposed SETU Services App seeks to fill by concentrating on student support and service access in a straightforward, efficient way.

MyStudentHub

1. **What the app is**
   MyStudentHub, is created for students to provide them quick access to academic information (tutoring sessions, marks, help desk), campus news, and general student resources through just a single platform.

2. **What is good about MyStudentHub**
   - Easy navigation and clear layout
   - Clean and modern user interface
   - Centralised access to student-related information
   - Personalised content based on the user
   - Mobile-friendly design
   - Reduces the need to search across multiple platforms
   - Notification system
   - Adapted to mobile devices

3. **What is bad / limitations of MyStudentHub**
   - Limited integration with real university services
   - Not designed specifically for SETU
   - Does not allow students to request or track services
   - Primarily informational rather than interactive
   - Cannot be customised for specific institutional needs
   - No tracking of request or issues

4. **Features worth reusing**
   - Simple and intuitive navigation
   - Student-centred design approach
   - Dashboard-style layout
   - Notification system
   - Personalised user experience

5. **Why it is relevant to our project**
   MyStudentHub is relevant to this project because it is a clear example of effective student-centred design and usability. Its clean interface,simple navigation highlight best practices in user experience. However, the limitations also helped identify a gap in existing solutions.

Product Vision

FOR SETU students

WHO need a single, reliable way to access campus services and student support

THE SETU Services App

IS A mobile student services application

THAT centralises service information, bookings, and support requests into one platform

UNLIKE academic-focused apps such as MyCampus and MyStudentHub, which primarily provide information

OUR PRODUCT is designed specifically around student services, enabling students to actively request, manage, and track support in a streamlined way

Existing student applications such as MyCampus and MyStudentHub focus primarily on providing academic information and general student resources. While these platforms centralise information, they do not centralise *student services*. The SETU Services App acts as a central hub by allowing students to access, request, and track multiple campus services—such as IT support, facilities, and student assistance—through a single, interactive platform rather than relying on separate emails, websites, or systems.

"Centralised" means:

- Provides one entry point for all student services
- Allows students to request services, not just view information
- Enables tracking of service requests in one place
- Reduces reliance on emails, phone calls, and multiple systems
- Focuses on interaction, not just information display
